Parabolic Ripper

BIGHAM

Shatter subsoil compaction to help root growth with the Bigham Parabolic Ripper Plow.

A deep tillage trip with the Parabolic Ripper eliminates hardpan underneath the seedbed, increases water intake, and reduces runoff.

- Standard Parabolic Rippers are also available with spring loaded swivel coulters for operation in high residue field conditions.

Parabolic Ripper

Standard features

- Parabolic shank is designed to take the ground deep. Standard 28" shank and optional 32" shank provide exceptional frame clearance.
- Component design of heavy double bar clamps enable staggered shank placements on virtually any row width. Clamps spread the load between two bars.
- Specialized trip bolt in the front of the clamp provides protection against structural damage to the plow if obstructions are encountered.
- Heavy diamond mast three bar frame and heavy duty Cat. III hitch are standard on all models. Rippers with coulters include tool bars with Heavy Duty Option

Optional Equipment and Accessories

- Shank may be equipped with rear knife plate or fertilizer delivery tube.
- Gauge Wheels
- Ripper Knives
- Special Tool Bar Options
- Mounted Finishing Tools
